Objective

Aspiring roboticist passionate about utilizing intersectionality of healthcare, humanoid robots, and human robot interaction research to create innovative solutions increasing access and adoption of robotic technology. Leveraging bioengineering design principles, humanoid and biomedical mechatronics research experience, and team leadership to drive projects impactfully. Pursuing internship opportunities in project management and robotics starting May 2026.

Education

Georgia Institute of Technology | Atlanta, GA

Bachelor of Science in Computer Engineering, High school GPA: 4.23/4 weighted

August, 2025 – Present

Expected Graduation, May 2029

Skills

Programming: Computer Vision (proficient), ROS (intermediate), Java (proficient), Python (intermediate), C++ (beginner)

Hardware: Raspberry Pi, Arduino, 3D Printing, Linear Slides, Soft Robotics, Microelectronics

Software: OpenCV, Computer Vision, Reinforcement Learning, Vision Language Action Models, SolidWorks, Onshape, Linux

Communication: Articulating and defining project requirements, Fostering collaboration, Exchange of technical information

Professional Organizations: Women in ECE, Naazqaat Dance Team, Medtech Hacks

Experience

Intern Biomedical Mechatronics Lab @ Georgia Tech

Fall 2025

Researching Cardiac MRI systems & Surgical Robotics Systems

Researcher Qian Lab University of Houston

Summer 2025

Developing a two-part robotic system to support nurses in Basic Life Support (BLS) training, reducing reliance on senior nursing staff and creating a training system capable of handling the influx of nurses expected and necessary in the future.

- Structuring and planning hardware and software systems, gaining hands-on experience with ROS, reinforcement learning, and NVIDIA platforms by creating custom manikin along with robotic tutor.

Bioengineering Intern Stanford Institute of Medicine Research Program

June 2024 – December 2024

Insulin Pump combining delivery of GLP-1 RA's

Built a prototype model to improve systems of medication administration by combining GLP-1 RA's and insulin to reduce H1B levels by 51% to improve standard of care as a part of SIMR (filed provisional patent)

- Validating algorithm and creating a poster for community poster session reaching 100+ attendees
- Directed need finding with team including literature review, organizing interviews with over 6 medical professionals to validate need area, and resolving conflict to ensure deadlines were met over the course of 3 months.

Leadership & Projects

First Robotics Competition

2021 - 2025

Cupertino High School Robotics Team 2473 President

Pinnacles Regional [2025] - rank 9, won Engineering in Inspiration Award, Contra Costa regional [2025] - competed in playoffs as pick 2 of alliance 4

- Managing a team of over 60 people and ensuring success of Public Relations, Outreach, Sponsorship, and Website subteams creating partnerships with over 6 clubs to increase member engagement by 1.5
- Implemented custom custom AprilTag detection algorithm utilizing OpenCV & Raspberry Pi's as Computer vision Subteam Lead leading to reduction in cycle time by 200%.
- Initiated consolidation of outreach events to be structured into tiers of impact to clearly quantify and organize outreach efforts reaching 700+ people

Head Sensei Code Ninjas Cupertino

2023 - 2025

Managing instructional lessons for Junior and Create Students

Organizing & structuring class content including 3D printing projects, communicating updates with parents for 100+ students

Coursework

Neural Networks and Deep Learning: Deep Learning.AI, Computer Vision bootcamp, Stanford AI in Healthcare Series
