

Nandika Kohli

Atlanta, GA | 630 506 7259 | nkohli32@gatech.edu | Green card | LinkedIn: www.linkedin.com/in/nandika-kohli

Objective

Aspiring roboticist passionate about utilizing intersectionality of healthcare, and human robot interaction research to create innovative robotic solutions. Pursuing internship opportunities in project management and robotics starting May 2026.

Education

Georgia Institute of Technology | Atlanta, GA

Bachelor of Science in Computer Engineering minor in Robotics

August, 2025 – Present

Expected Graduation, May 2029

Skills

Programming: Computer Vision (proficient), ROS (intermediate), Java (proficient), Python (intermediate), C++ (beginner)

Hardware: Solidworks (formal training), Onshape, Raspberry Pi, Arduino, 3D Printing, Linear Slides, Soft Robotics

Software: OpenCV, Computer Vision, Reinforcement Learning, Vision Language Action Models, SolidWorks, Onshape, Linux

Communication: Articulating and defining project requirements, Fostering collaboration, Exchange of technical information

Professional Organizations: Women in ECE, Naazqaat Dance Team, Medtech Hacks, Robotech Hackathon

Experience

Intern Biomedical Mechatronics Lab @ Georgia Tech

Fall 2025 - present

Researching Cardiac MRI systems & Surgical Robotics Systems

- Modeling surfaces to measure accuracy of needle positioning device used in a cMRI machine during tumor detection.
- Utilizing ROS 2 and imitation learning to research endoscopy attachment with cameras in dVRK robot for cyst removal.

Researcher Qian Lab University of Houston

Summer 2025 - present

Developed a two-part robotic system to support nurses in Basic Life Support (BLS) training, reducing reliance on senior nurses

- Structuring and planning hardware and software systems modeling through CAD and using MatLab

Bioengineering Intern Stanford Institute of Medicine Research Program

June 2024 – December 2024

Insulin Pump combining delivery of GLP-1 RA's

Built a prototype to improve systems of medication administration by modulating insulin and GLP-1 RA through a single needle.

- Filed provisional patent for device and reduced HbA1c levels by 51% to improve standard of care for patients.
- Validated algorithm via accuracy tests and creating a poster for community poster session reaching 100+ attendees.
- Directed need finding with team including literature review, organizing interviews with over 6 medical professionals to validate need area, and resolving conflict to ensure deadlines were met over the course of 3 months.

Leadership & Projects

VIP Safe Robotics Lab @ Georgia Tech

Spring 2026 - present

Researching safe motion generation for executing high-risk tasks in hospitals and other real world settings using robots.

- Designing mobile teleoperation interface to control bimanual robotic arms using MuJoCo to create safe control policy.

Robotech Hackathon @ Georgia Tech

Spring 2026

Developed a repair robot meant to operate in space, won 2nd placed in autonomous track out of 110+ participants

- Led design and implementation of a scalable, resource-aware architecture for constraint driven decision making.

Medtech Hackathon @ Georgia Tech

Spring 2026

Won first place in the occupational therapy category in Medtech Hacks out of 21 teams, total 80+ participants

First Robotics Competition

2021 - 2025

Cupertino High School Robotics Team 2473 President

Pinnacles Regional [2025] - rank 9, won Engineering in Inspiration Award, Contra Costa regional [2025] competed in playoffs

- Managed a team of over 60 people and ensured success of Public Relations, Outreach, Sponsorship, and Website subteams while creating partnerships with over 6 clubs to increase member engagement by 1.5x.
- Implemented custom AprilTag detection OpenCV & Raspberry Pi's as subteam lead reducing cycle time by 200%.

Coursework

Neural Networks and Deep Learning: Deep Learning.AI, Computer Vision bootcamp, Stanford AI in Healthcare Series
